

## Remote Pull-to-Lock Chamber

**omni brake**<sup>®</sup>

# OMNIBRAKE

TSE Brakes offers a unique “pull-to-lock” chamber as part of its OmniBrake family. This chamber was originally designed as a tailgate lock for dump trucks/trailers that allowed drivers to release the tailgate when air pressure is applied. In addition to use as a tailgate lock, the remote chamber has found many new markets, including use as a drawbar lift and clamp apparatus.

### **Better Design**

The OmniBrake remote chamber features TSE's patented design with a completely sealed, all steel housing and center section. The main spring is made from chrome silicon pre-tempered wire and specially coated to provide you with premium life and durability characteristics.

### **Corrosion Protection**

OmniBrake remote chambers undergo TSE's in-house full immersion e-coating of housing and internal components, guaranteeing 100% coating and consistent thickness for excellent corrosion protection.

### **Stroke**

The remote chambers are available in a 2.5" and 3" stroke, with custom specifications available upon request.

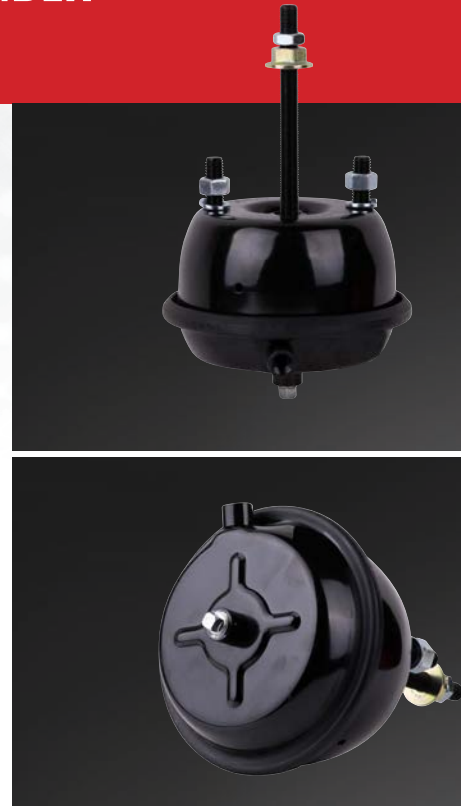

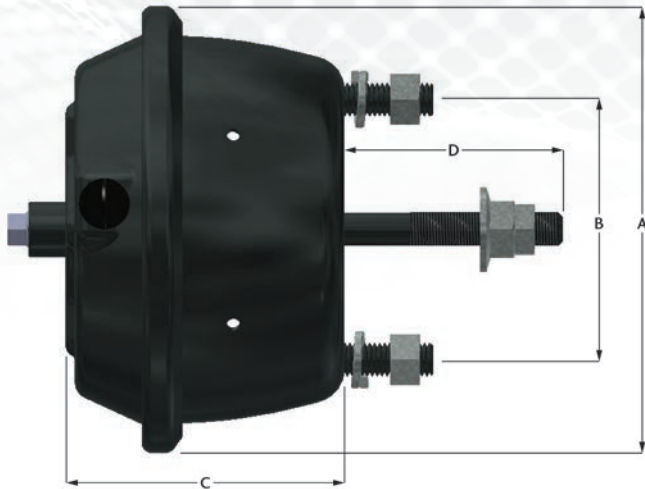

### **Warranty**

OmniBrake remote chambers feature a 3-year warranty standard and 2 years for severe service applications.
